Free Super LoiLoScope Venus Update
Supporting NVIDIA GeForce GT240/GT220 Dual Stream Decode
2 Full HD video parallel playbacks with GPU
~Amazingly Fast Full HD Editing~

January 7th 2010- LoiLo Inc. with its principle place of business at Endo, Fujisawa, Japan, CEO: Koji Sugiyama, has provided free update for Super LoiLoScope VENUS. Now supporting NVIDIA GeForce Dual Stream Decode and ultimately eliminating CPU usage, editing process has become extremely smooth with 2 H.264/AVC full HD quality playbacks including AVCHD, single reflex camera(.mov), Xacti(mp4) etc. 5.1ch video playback has also been included as one of the latest features bringing to you stress free full HD video editing to all.

NEW Super LoiLoScope Venus 1.7.1 features

● **FullHD GPU Dual Stream Decode**

Supporting: NVIDIA GeForce GT240/GT220

In order to preview the must have “transition” overlapping multiple videos and “superimpose” that allows you to view multiple videos together in *real time*, at least 2 full HD parallel playback is required. GPU and Dual Stream Decode ultimately decrease CPU usage and increase productivity level. Over 3 stream playback/edit is even possible also with fast CPU.
